### **1. General Guidelines for the handling of engDAX**

The handling of engDAX is carried out via HTML based interfaces. You can use all functions of the software from your web browser.

You can start engDAX from almost every network computer.

The only condition is that the client computer has access to the engDAX computer on network level. With an active firewall the ports 80, 1433 and 2710 must be open on the engDAX server.

To be able to use correctly all engDAX functions the Flash Plugins and Microsoft Silverlight should be installed on the client computers. You find them in the folder "ISSetupPrerequisites" of the set up routine.

You access engDAX with your web browser. There fore please start the browser on your computer. Fill in "http://server/*P*/eng*DAX*" in the address bar of your browser.

#### For example:

Your administrator provides you with the exact address (IP Adress/DNS name of the DAXware computer)..

### 1.1 The engDAX window

		Company and Name of the logged in user	
	Mustermann AG		🖳 Abmelden

#### Log on to engDAX 2.

To log in on the system you need user name and password. Ask your engDAX system administrator for them.

Now enter them into the according fields of the interface.

Begeisterung, nachhaltige Motivation und Erfolg. Für und mit unseren Kunden

### 2.1 Error messages during logon

In case of an incorrect login you will receive this message

User name	User	
Password		
	<u>.</u>	

The logon is case-sensitive, this means that upper and lower case of the password are checked. Please check first if you mistyped or if the caps lock is active. If the log in has failed despite the correct entry of your login data, you should consult your engDAX system administrator who can check your entries in engDAX and overwrite them if necessary.

Please note definitely the message, which engDAX communicates you under the login window. If you receive a message which you cannot interprete, please contact your engDAX system administrator at first!

#### After 5 times wrong password this message appears

User name	User	
Password		
-		
Log on		

Your account has been deactivated due to too many incorrect attempts. Your system administrator has the possibility to reactivate your account and reset your password.

### The following error messages will appear in case of problems directly on the system

Please always pay attention to the message engDAX gives you. If you receive a message that you do not know, please contact your engDAX system administrator first.

An example of this would be the messages:

Meldung von Webseite	X
Failed to establish co	nnection to comDAX!
	ОК

Your system administrator can check the system directly and restart engDAX services.

### 3. Log out from engDAX

If you want to log out click the button so on the top right corner of the user interface..

🗞 engD	AV	Mus	termann A	G		😼 Log off
	AA	Fran	ık Mustern	iann		English 💌
Order creation Receive	d orders	Sent Orders	User profile	Administration	Monitoring	Archive

### 3.1 Automatic Log out from engDAX

If you do not carry out any activities on the system for 20 minutes you are automatically logged out.

If you want to carry on you have to log in again with your access data. In this case engDAX memorizes the most recently performed action.

If you close the explorer window without a correct logout, the session stays active for further 20 minutes. If a Floating Licence is used no other user can use the licence for this period.

### 4. Change password

Every user can change his own password in the system.

To do this, go to the Password tab under User Profile.

Auftragserstellung	Eingehende Auf	räge Ausgehende Aufträge	Benutzerprofil	Monitoring	Archiv			
Benutzerprofil								
Konfiguration des Abwes	enheitsassistenten	sowie Passwortänderungen kön	nen hier vorgenomn	nen werden. Fa	lls das Modul Directorys	can installiert ist	, können hier eben	falls gescannte Dateien

Aktuelles Kennwort								
Neues Kennwort								
Neues Kennwort bestätig	en							
E Speichern 🖉 A	brechen							

Enter your current password and your new password, including confirmation request. Save the changes.

The new password must be used the next time you log in.

### 5. Out of office assistant

If other engDAX users (e. g. in case of temporary absence) want to see their own orders and possibly be notified about inputs and/or outputs, so-called substitutes can be assigned via the Out of Office Assistant (user profile).

No substitutes are created/activated by default.

Create a new substitute using the button

Order creation	Received orders	Sent Orders	User profile	Administration	Monitoring	Archive	
User profile							
				rformed here. If the	module directo	y scan is installed, you are also able to send scanned files.

If you select more than one substitute, all selected substitutes in the list are activated when you activate the Out of Office Assistant! An individual selection is not possible.

A deputy can be removed with this button  $\overline{\mathbf{m}}$  .

This button 🖍 can be used to activate or deactivate the notification mail for the deputy.button.

### 6. Sendig Data Files

To send files to your partners, you need to switch to the tab Order creation

Nen en	ΠΔΧ	Must	termann A(	<u>G</u>							
	JUN	Fran	Frank Mustermann								
Order creation	Received orders	Sent Orders	User profile	Administration	Monitoring	Archive					
Order creation Here you can create a	new order to all your	assigned partners	s. Depending on	the transfer type (E	NGDAT, OFTP	) options will be enabled or disabled.					
Partner selection	]										
Partner selection from	m favourites list		~								
Partnersearch:											
- Partner											
	nbH & Co KG, Berghau	sen									
T .	nn AG, Musterstadt										
+ Volvo, Gö	ohn KG, Neuerstadt teburg										

By selecting the recipient, you determine whether you want to send files by pure **ODETTE** (company to company) or by **ENGDAT** (employee to employee).

When you select an user (employee) created by the engDAX system administrator, an ENGDAT package is automatically created.

If you select the "ODETTE user" instead, the order is sent via ODETTE and without ENGDAT support.

If you miss a data exchange partner or employee, your eng**DAX** system administrator has either not entered the corresponding partner or you have not yet received a data exchange agreement with this partner. In this case, please contact your eng**DAX** system administrator who can provide you with the appropriate settings.

### 6.1. Sending to companies – ODETTE

First select the partner you want to send to from the partner list. Now select the employee "ODETTE-User".

Order creation Received orders Sent Orders User p	rofile Administration Monitoring	g Archive
Order creation fere you can create a new order to all your assigned partners. Depen	ding on the transfer type (ENGDAT, OF	TP) options will be enabled or disabled.

Contact data		🕀 Send 🧭 Cancel

On the right side of the main window appears an area where you can select files.

Load the files to be sent into the system via the button

Clicking this button displays the file selection list:

File selection					
	A	Upload	0	Cancel	 Close

Click here on the button I Upload

Alternatively, if enabled by your administrator, you can also access a server directory directly. This is handy in that you can immediately and directly access a file drive on which all files to be sent are stored.

To do this, select the button

You can now select the location of your file in your browser. Select one or more files.

Ordner				III +	
Name	Änderungsdatum	Тур	Größe		
A_4878979790.cadpart	01.02.2018 14:32	CADPART-Datei	1 K	в

~	Berger GmbH & Co KG Serial file name	ODETTE-User Original file name	Mustermann AG	Virtual file name	J. H.	File type	File size	Status	Progress		

The order disappears from monitoring.

### 6.2. Virtual filename

Files sent by pure ODETTE (company to company) are always transferred to the recipient with the original file name.

The file name size is limited to 26 characters per protocol. All characters greater than 26 are truncated by the system for shipping!

If a partner requires a certain file name, a virtual file name can be specified for the transfer only.

To do this, click on the file in the file list:

ile selection	🛱 Upload 📪 Server directory	
Jploaded files	Kotfluegel_BMW_X5.cadpart	
compression format	None	
riority end time	Normal	

#### A new window will open

		~
File name	Kotfluegel_BMW_X5.cadpart	
Size	30 Bytes	
Virtual file name	Kotfluegel_BMW_X5.cadpart	
File format	Please select	

### In the "Virtual filename" field, enter the file name required by the partner.

		~
Dateiname	Kotfluegel_BMW_X5.catpart	
Größe	100 MB	
Virtueller Dateiname	V284_X5_KOT.catpart	e. E
Dateiformat	Bitte wählen	

Confirm the changes by clicking on v.

### 6.3. Sendign to users (employees) - ENGDAT

The ENGDAT standard was introduced to send files directly and automatically to certain employees of a company. It is therefore no longer necessary for the recipient to transfer the received files manually to an employee. This is done by the system itself.

ENGDAT jobs always consist of at least 2 files. This is the actual (useful) file and an information file, the so-called abstract file. The abstract file contains all information important for the receiving system to be able to transfer (route) the received user files to the desired recipient.

For ENGDAT requests, the system names all the files contained in them in an ENGDAT-specific virtual file name. It is therefore not possible to specify your own file name for the transfer (virtual file name) manually.

The structure of an ENGDAT file name is fixed.

ENGDateTimestampENGDATCodeNumber of filesFile number of the order

#### Bsp:

#### ENG180206115826PART1002001

To send files directly to an employee, proceed as follows:

First select the partner you want to send to from the partner selection list. Now select the employee you want to send to.

If you miss a partner employee, your engDAX system administrator has either not entered the corresponding employee or you have not yet received a data exchange agreement with this partner. In this case please contact your engDAX system administrator, who can provide you with the corresponding settings.

Order creation Received orders Sent Orders Use	r profile Administration Monitoring A	rchive

<b>Pakettyp</b> -> Obligatory	The package type indicates the ENGDAT protocol version with which files should be sent. There are the versions V1, V2 and V3 available. At the moment the standard version is V2, which can be processed by any ENGDAT system. If your partner requires another version he will inform you separately
ENGDAT Compression -> Optional	The ENGDAT protocol includes the compression of user data with the format gzip. When you activate the compression for an order, all files of this order are separately packed for the transmission. Therewith the data volume of this order is reduced. The compression is carried out in the background and not visible for the user. Each system which is able to process ENGDAT orders can decompress incoming ENGDAT files, compressed with ENGDAT compression independently automatically and without effort of the user. This is carried out in the background and not visible for the user. The automatic decompressing applies not for transferred zip, tar, or rar formats.
Exchange Profile -> Optional	see: Temporary Exchange Profile Your eng <b>DAX</b> system administrator can summarize the information from the temp. exchange profile in a so-called exchange profile and store it for the communication partner. This eliminates the need for manual selection for each shipment. Contact your eng <b>DAX</b> system administrator if you would like to have this stored.
Tempoary Exchange Profile -> Obligatory	ENGDAT requests must specify which files are in the package. The parameters for the "generation system", the "file format" and the "character set" must be specified. This information is required. The values to be selected can be adjusted and supplemented by your eng <b>DAX</b> system administrator.
<b>Usage</b> -> Optional	For the purpose of use of the files of an ENGDAT package there are predefined values which can be selected in the pull-down menu. This is an optional value that does not need to be selected. The selection parameters cannot be adjusted because they are permanently stored in the ENGDAT protocol.
Free Text -> Optional	In order to be able to provide the recipient with comments, there is the "Free text" field. This field is optional and does not have to be filled.

The order is removed from monitoring.

### 6. 4. Planned Send

It is possible to create orders in engDAX which are not taken up and sent immediately by the system. This is particularly advantageous if files are expected by the partner at a certain time or if the number of channels is limited and large files are to be sent at a time when the data volume is low (e.g. at night).

When creating the order, the "dispatch time" can be specified.

Order creation	Received orders	Sent Orders	User profile	Administration	Monitoring	Archive	
Order creation							
Here you can create a	new order to all your	assigned partner	s. Depending or	the transfer type (I	ENGDAT, OFTR	P) options will be enabled or disabled.

### 6. 5. Pausing orders

It is possible to pause jobs after creation to check the file content before sending it to the recipient. This scenario occurs primarily in logistical data exchange.

The user of eng**DAX** cannot initiate the pause of orders. This is reserved for the eng**DAX** system administrator, who creates the rule for pausing orders.

If the system pauses orders as specified, this is indicated by their status  ${igsackslash}$  .

If you have questions why an order is paused, please contact your engDAX system administrator.

The order can be continued after checking the file using the button **>**.

The list grows to a maximum of 20 entries per page. If there are more transmissions, new pages are generated, which can be selected via the page number in the lower area of the list.

Berger GmbH & Co KG	ENGDAT-User	Mustermann AG	Grüner, Frank	OFTP-ENGDATV12	2	6/5/2018 1:23:42 PM		14	۲
Berger GmbH & Co KG	ODETTE-User	Mustermann AG	ODETTE-User	OFTP	1	6/5/2018 1:20:20 PM		14	۲

The overview list shows the most important information such as **sender**, **recipient** (employee or ODETTE user), **time of receipt** and **status of the order**. See also <u>Status of an order</u>

### 7. 1. Locate a storage location

If incoming files are automatically stored by the system in a directory specified by the eng**DAX** system administrator (For more information, see <u>Saving files</u>), the file location can be read in the ProcessCard (For more information, see <u>ProcessCard of a filei</u>).

To do this, open the ProcessCard of the file and search for the area Attached Files

	Processca	rd-View
เอกมอและเ	14035

	DeleteOnCleanup	false
	DeleteOnProcessCardDelete	false
	Timestamp	2018-06-05T13:34:17.530628+02:00

### 8. Status of an order

An order can have different statuses during processing.

- The order is currently being sent. If the status does not change, although the transfer 100%, the partner does not acknowledge the files. This can be an error on the partner side or an incorrect file (content or encryption). See also <u>error handling</u>
- All files of an order have been successfully sent and acknowledged by the recipient.
- The job was manually cancelled by a user. It is not possible to make the order more reactive. The files must be entered in a new request.
  - The order has run on error. See error handling

- Sending the order is planned. See planned transmission
- The mission has been paused. See also Pause orders

### 9. Details of an order

The details of a job show which files were sent at what time. It can also be checked whether all files were sent successfully.

In the event of an error, the so-called "ProcessCard" can be used to check exactly where the problem with the order lies.

The details can be opened using the arrow at the beginning of an order line:

		reation	Received orders	Sent Orders	Iser profile Adminis		ng Archive						
Ser	nt Or	ders											
Imi	nistratio	on of ou	tgoing orders										
			Activate filter 🖹 A	and the second se

The structure is as follows:

Virtual file name	The file arrives at the partner with this name
Status	The current transfer status of the file. See also Status of an order
	If this function has been activated by your eng <b>DAX</b> system administrator, you can download and save your original file again.
6	If errors or problems occur, the cause can be found in the ProcessCard.
•	All files of a job can be sent again. You can select another recipient. There is no need to upload the files again.

### 10. ProcessCard of a file

The ProcessCard is the so-called routing slip of a file. This contains all the information and workflow steps that the file has gone through in the send or receive process.

The ProcessCard is mainly used for automatic process mapping (reading out individual ProcessCard attributes) and for troubleshooting (jobs running red).

You can find the ProcessCard via the button in the details of an order at the end of the file line

	Berger GmbH & Co KG		ODETTE-User	Mustermann Ad	3	Grüner, Frank	OFTP	1	6/5/2018 2:5	i4:57 PM		100%		1 🕀

### 11. Saving a file

### 11. 1. Automatic file storage - routing

In principle, all incoming files are automatically stored by eng**DAX** in a previously defined directory, so that the user only has to look into this directory to be able to use the files.

The directory is specified in the administration by your eng**DAX** system administrator. If you have any questions, please contact them.

This function can be deactivated by your engDAX system administrator.

### 11. 2. Saving files manually

Alternatively it is possible to download both incoming and outgoing files manually to the local computer or a server directory via the engDAX interface.

This function can be deactivated by your eng**DAX** system administrator. Then a manual download is not possible.

There are 2 different ways to download files.

#### Single Download:

In <u>Details from the order</u> you can download and save all files individually using the button  $\blacksquare$ . All directories and drives that you have also connected in your Windows Explorer are available to you.

#### Container Download:

If you want to download all files of a package (useful for ENGDAT packages with a large number of user files) at once, you can use the container download.

This is located directly in the overview line of each order. Click on the button  ${}^{\rm M}$ .

0	rder cr	reation Received orde	rs Sent Orders	User profile Admir	nistration Monito	ring Archive

In the background, all files of the package are packed into a zip package.

### 12. Canceling an order

An order can generally be canceled as long as the order does not have the status  $\checkmark$ . A job can only be aborted manually by a user. The system does not cancel any orders.

In principle, it is only possible for users to cancel their own orders. Orders from other users cannot be cancelled.

### 12. 1. Canceling a current order

Orders that have the status rightarrow cancelled in the order lists using the button 2 at the end of the order line.

	Receiver company	Receiver	Sender company	Sender	Transmission type	Amount of files	Created	Status	Progress	
>	Berger GmbH & Co KG	ODETTE-User	Mustermann AG	Grüner, Frank	OFTP	1	6/11/2018 11:09:53 AM	P	0%	0

Canceling is also possible on the Transfer Status (Monitoring) tab.

o records found to disp	lay					10						
D Send												
Sender company	Receiver company	File name	Protocol	Status	Last message	Start time	Attempts	Already transferred	Speed	Progress		
Sender company												

It is not possible to reactivate an order once it has been cancelled!

### 13. Reactivating an order

An order that has run on errors can normally be reactivated after the cause of the error has been eliminated. Exceptions are communication-specific errors in which, for example, incorrect file encryption has already been performed.

For more information on identifying the cause of an error, see Error messages & their meaning.

After the error has been corrected (in the example: incorrectly entered routing directory), the workflow step previously run to error can be restarted in the Error Handling area using the button .

Refr			orkliow step		Sender		Receiver	Erro	message			

Processing of the request is now continued (repeat the last workflow step that ran on error).

If no further errors occur, the order can be successfully completed 🚩.

### 14. Monitoring

### 14. 1. Transmission status

In the tab transmission status all running connections and open channels are displayed. Transfers can be aborted *O* and retriggered <sup>1</sup>/<sub>2</sub> (reset network).

Order creation	Received orders Sent Order	s User profile Administration	n Monito	oring Archive								
Transfer status	Network status Error ma	nagement Sessions System	1 log St	atistic

### 14. 2. Error management

If orders in the order lists run in , the errors can be checked both in the <u>ProcessCard</u>, and in the <u>Error management</u> tab. The workflow step and the error message are displayed in a list.

Ore	der creation	Received orders	Sent Orders	User profile	Administr	ration	Monitoring Archive

Error	ComDAX.Reporting	ProcessCard status was set to Error		
		by remote system (SFNA 17 - UnencryptedFileNotAllowed: Unencrypted file not allowed)		

After the error has been corrected, (im Bsp: fehlerhaft eingetragenes Routingverzeichnis) the workflow step previously run to error can be restarted using the button . Processing of the order is now continued. If no further errors occur, the job can be completed successfully.

Alternatively, unknown error messages can be sent directly to the HÜNGSBERG Service by e-mail.

Prerequisite for this is a configured e-mail server in the administration of engDAX. Please contact your engDAX system administrator for this.

Your request will be booked and processed in the HÜNGSBERG AG Service Ticket System.

### 14. 1. Statistik

In the Statistics tab you can check your sent and received orders, files and data volumes.

Numerous filter settings are available for this purpose.

Order creation Received orders Sent Orders	User profile Administration Monitoring Archive		
Transfer status Network status Error mana	gement Sessions System log = <u>Statistic</u>

	Ø Effectively tranferred data volume per order	1.07 MB	

Note that only the requests assigned to you are displayed. The engDAX administrator/system administrator has an overview of all orders.

### 15. Archiving of an order

To keep track of all incoming and outgoing orders, you can use the order archiving function.

The engDAX administrator can deactivate these rights for users. Then this function is not available to you as a user!

In the order lists, data can be selected that is no longer to be displayed in the respective overview.

It is not possible to archive orders of other users!

Only successfully processed or manually canceled orders can be archived! Orders that have run on errors or have not been completely processed cannot be archived. For more information, see <u>Status of an order</u>.

To archive an order, select it in the selection field at the beginning of the order line.

	der cr	Received order	rs Sent Orders	User profile Admin	istration Monito	ring Archive

### 17. Deleting an order

The deletion of orders is possible via the archive list of engDAX. Orders must therefore first be archived from the order lists before they can be completely removed from the system. For more information, see Archiving an Order.

The engDAX administrator can deactivate these rights for users. Then this function is not available to you as a user!

To delete an order, select it in the selection field at the beginning of the order line.

### 18. Error

### 18. 1. Error messages & their meaning

Errors can generally be sorted into order and communication errors.

In case of <u>order errors</u>, the communication is OK (receipt 100%) or could not yet be initiated (no transmission attempt of the order), but the creation/processing of the files cannot be carried out before sending or after receipt.

Files do not appear in the monitoring.

#### Examples:

after receipt:

- File cannot be stored in target directory, as there is not enough storage space there.

before sending:

- The conversion of the EDI data into the target format of the customer runs on error.
- For ENGDAT orders, no routing code is assigned to the recipient employee in the master data.

<u>Communication errors</u> cause terminations before, during or after the connection.

#### Examples:

before connection:

- ISDN partner is busy (user busy)
- Partner system is not reachable/not respondingartnersystem

during connection:

- The partner system does not return any activity commands (CDT) (timeout)
- the OFTP2 security settings of both systems do not cooperate
- The OFTP settings are incorrect (the VDA identification of the partner is not known)

after the transfer:

- Partner does not send back an acknowledgement (EERP) of the files. (File remains on processing with the status "Transmitted" at 100% in monitoring)
- E Received file cannot be decrypted

### 18. 2. Order error

Order errors can be found in the <u>ProcessCard</u> of the file concerned. Expand an order that has failed and open the ProcessCard at the end of the file line:

Orde	er creation Received order	Sent Orders	Jser profile Admin	nistration Monitori	ing Archive							
ent	Orders											
1000	ration of outgoing orders

If the cause of the error is eliminated, the user can reactivate the request using error handling.

If you cannot interpret the error text or have questions, please send us the corresponding ProcessCard by e-mail to <u>service@huengsberg.com</u> with a description of the problem.

### 18. 3. Communication errors

A distinction is made between file-related errors and session-related errors.

Communication errors can also be found in principle in the ProcessCard of the file concerned.

Expand an order that has failed and open the ProcessCard at the end of the file line:Fran

Order of	creation Received orders	Sent Orders	User profile Adm	inistration Monitor	ring Archive

In contrast to order-related errors, it is not always possible to reactivate the order once the cause of the error has been corrected. For example, if the cause was an incorrect security setting, the file cannot be sent again after the settings have been corrected. The reason for this is that the encryption step has already been successfully carried out. The file is already encryted/is still unencrypted at the communication core. In this case, you can only terminate and regenerate the order.

### Error messages concerning the transmission are also described in the logbook of the OFTP kernel.

#### Path to the communication logs:

communication server: C:\ProgramData\HUENGSBERG AG\comDAX\Directories\Logs

C:\ProgramData\HUENGSBERG AG\comDAX\Directories\Logs

	1 og 20170117 031906 vml	70.01.2017.00-00	XMI -Datai	17 KR		

Locate the log file that was created at the time of the error/transfer. Before sending the log file(s) to service@huengsberg.com, please include the following information:

- Partner company
- Date & time of transmission
- File name

This will allow us to search the logs for the error.

### ODETTE Error in Command Code ESID (End Session ID) - Session-Specific

The errors can always be reported by both the sending and receiving systems. The reporting system can only be determined via the log file.

'00' Normal session termination	
'01' Command not recognized - An Exchange Buffer contains an invalid command for the current state of the receiver.	Command unknown. An NSDU has been received whose friendly code (1st byte of the NSDU) is unactivated.
'02' Protocol violation - An Exchange Buffer contains an invalid command for the current state of the receiver.	Violation of protocol. An NSDU (Network Service Data Unit) has been received whose friendly code indicates a function that is invalid in the current status of the receiver.
'03' User code not known	The SSID of the sender or receiver is incorrect. Typing error or not yet set up.
'04' Invalid password	The ODETTE password of the sender or receiver is incorrect. Typing error.
'05' Local site emergency close down	The receiving system
'06' Command contained invalid data	command contained invalid characters. A field in the NSDU contains invalid data.
'07' Exchange Buffer size error	Received NSDU with correct friendly code but incorrect length.
'08' Resources not available	OFTP2: Receiving system has imported wrong certificate.
'09' Time out	Timeout in the ODETTE protocol. The receiving system has not responded for a certain time. The sitting is closed.
'10' Mode or capabilities incompatible	OFTP2: Receiving system is not switched to OFTP2.
'11' Invalid challenge response	OFTP2: Receiving system has not yet imported certificate
'12' Secure authentication requirements incompatible	Security settings are not compatible. The systems are set differently.

### ODETTE Error in command code EFNA (End File Negative Answer) - File-related

The errors can always be reported by both the sending and receiving systems. The reporting system can only be determined via the log file

'01' Invalid filename.	The receiving system denies the file because only files with specific file names (or ENGDAT names in the CAD area) are allowed.
'02' Invalid destination.	The SFID identifier of the recipient is rejected
'03' Invalid origin.	The SFID identifier of the sender is rejected
'04' Storage record format not supported.	File format is not supported (F, U, V)
'05' Maximum record length not supported.	Specified record length is not supported (128.80)
'06' File size is too big.	File too large for receiving system
'10' Invalid record count.	Invalid block counter
'11' Invalid byte count.	Invalid byte counter
'12' Access method failure.	Invalid access method
'13' Duplicate file.	File already received (file name & timestamp in SFID were already used for another file)
'14' File direction refused.	Receiving system does not allow receiving files
'15' Cipher suite not supported.	OFTP2: Encryption method not accepted
'16' Encrypted file not allowed.	OFTP2: System requires unencrypted files
'17' Unencrypted file not allowed.	OFTP2: System requires encrypted files
'18' Compression not allowed.	OFTP2: System requires uncompressed files
'19' Signed file not allowed.	OFTP2: System requires unsigned files
'20' Unsigned file not allowed.	OFTP2: System requires signed files
'21' Invalid file signature.	OFTP2: Files were signed with wrong certificate, or receiving system uses wrong partner certificate
'22' File decryption failure.	OFTP2: System cannot decrypt data
'23' File decompression failure.	OFTP2: System cannot decompress data
'99' Unspecified reason.	Unspecified error that does not correspond to one of the other causes
